

## QUALITY AND ENVIROMENTAL POLICY

Condensia maintains a Quality and Environmental Management System committed to sustainable growth, providing value to our customers and our environment, through products of proven quality, tailor-made and for niche applications, through continuous improvement applied to all our processes.

On this path of personal and corporate growth:

- ✓ We seek to build solid and lasting partnerships with our customers and other partners, based on mutual cooperation and trust, through a relationship that is always direct and communicative, honest, fast and flexible.
- ✓ We invest in the development of our resources, both know-how as infrastructure and technology, in order to optimize our own economic performance.
- ✓ We have made a strategic commitment to Research, Development and Innovation (R&D&I), which allows us to take advantage of the opportunities of a highly competitive environment and has enabled us to develop a range of biodegradable products.
- ✓ We work proactively to protect the environment, in compliance with current legislation, evaluating and optimizing our processes to minimize their environmental impact, particularly the generation of special waste.

The people who work at Condensia make this reality possible thanks to a corporate culture based on values such as respect, professionalism, integrity and teamwork.

Marco Paolo Ara
